TEKVOX and Cisco Integration

Drop-In Control

Consolidated Controls

With TEKVOX's revolutionary TekMonitors, any Cisco Touch 10 touchscreen can control a full Drop-In A/V® system and any connected Cisco equipment, all through a single interface. By keeping all the controls in one place, this integration modernizes the control scheme and streamlines the user experience, resulting in systems that are quicker to install, simpler to commission, and easier to use.

No Programming Required

Any TekMonitor can be loaded with a comprehensive driver to communicate with any Cisco device—no programming needed. Cisco In-Room Controls makes it easy to create a custom user interface with buttons to control every aspect of the system, from the displays to the Cisco video conferencing equipment.

Features and Benefits

This fully-integrated solution retains all the benefits of TEKVOX's remote and enterprise management tools, as well as the advanced functionality of the Cisco Touch 10 itself.

- Remote control, monitoring, support, and updates
- Customizable user interface for excellent user experience
- Control of A/V and conferencing systems from a single device
- 3-year warranty for A/V equipment, and lifetime warranty for system programming
